What's New?

Permissions Service is intended for developers implementing solutions that require executing a PayPal API operation on behalf of an account holder. Check out what's new in the current release.

Release 89 Changes

Maintenance release.

Preface

With the Permissions Service, you can ask your customers for permission to make API calls on their behalf programmatically.

Documentation Feedback

Help us improve this guide by sending feedback to:
documentationfeedback@paypal.com

1

About the PayPal Permissions Service

With permission, you can execute PayPal API operations for a PayPal account holder. The PayPal Permissions Service provides a way for account holders to grant permission to execute API operations on their behalf programmatically.

Permissions Service Overview

Granting of permissions is handled by the Permissions Service API. If you call these API operations, the account holder need not set third-party permissions in the Profile and then explicitly notify you that permission has been granted. Your website or application can incorporate this task seamlessly by calling Permissions Service API operations.

The Permissions Service API enables you to request and obtain permission from PayPal account holders, such as the merchants or customers. Consider the following examples in which the Permissions Service API can be used:

- You provide a shopping cart for merchants and need to make calls to the Express Checkout API to complete payments into the merchant's account. As a shopping cart provider, you are a third party to the transaction between PayPal and the merchant and, thus, require permission from the merchant to take actions that affect the merchant's PayPal account. The Permissions Service API enables your cart to request permission to execute Express Checkout APIs on your behalf.
- You sell an application that provides reports and analyses of your customers' PayPal transactions. Accessing this information requires customers to grant you permission to call the PayPal `TransactionSearch` and `GetTransactionDetails` API operations to access their transactions. You can use the Permissions Service API to request permission of each customer to execute `TransactionSearch` and `GetTransactionDetails`.

After requesting permission, you redirect the account holder to PayPal to grant the permission:

Log Out | Security Center Search

PayPal

Grant Permission to Shopping Cart Software

You are in the process of authorizing platform sdk's Test Store access to your account information.

Required Permissions

- Use Express Checkout to process payments. [What's this?](#)
- Authorize and capture your PayPal transactions. [What's this?](#)
- Refund a transaction on your behalf. [What's this?](#)

For more information about the permissions you are granting, see [Third Party Permissions](#).

To revoke permissions at any time, log in to your PayPal account and choose Profile, then API Access, and then choose Manage API Permissions.

Once permission has been granted, you can execute the PayPal API operations associated with the permissions on the account holder's behalf. To determine what permissions you need:

1. Determine the specific PayPal API operations that you will call as part of your application or service.
2. Identify the groups that contain these API operations.
3. Request permission to execute the API operations by group.

Permission Groups

Permission groups are the bundles of PayPal APIs that you can request permission to call on behalf of a PayPal account holder. In your request, you specify one or more group IDs that cover the API operations you need to call.

Display description	Group ID includes
Use Express Checkout to process payments.	EXPRESS_CHECKOUT includes <ul style="list-style-type: none"> • SetExpressCheckout • GetExpressCheckout • DoExpressCheckout • GetPalDetails
Process your customers' credit or debit card payments.	DIRECT_PAYMENT includes DoDirectPayment

Initiate transactions to multiple recipients in a single batch.	<p>MASS_PAY includes MassPay</p> <p>NOTE: You must have prior approval from PayPal to request this permission.</p>

Display description	Group ID includes
Obtain transaction specific information.	TRANSACTION_DETAILS includes GetTransactionDetails NOTE: You must have prior approval from PayPal to request this permission.
Search your transactions for items that match specific criteria and display the results.	TRANSACTION_SEARCH includes TransactionSearch
Create and manage recurring payments.	RECURRING_PAYMENTS includes <ul style="list-style-type: none"> • CreateRecurringPaymentsProfile • GetRecurringPaymentsProfileDetails • ManageRecurringPaymentsProfileStatus • UpdateRecurringPaymentsProfile • BillOutstandingAmount
Obtain your PayPal account balance.	ACCOUNT_BALANCE includes GetBalance NOTE: You must have prior approval from PayPal to request this permission.
Dynamically encrypt PayPal payment buttons on your web site.	ENCRYPTED_WEBSITE_PAYMENTS includes Encrypted Website Payments NOTE: You must have prior approval from PayPal to request this permission.
Refund a transaction on your behalf.	REFUND includes <ul style="list-style-type: none"> • RefundTransaction • Refund
Issue a credit to a debit or credit card.	NON_REFERENCED_CREDIT includes DoNonReferencedCredit NOTE: You must have prior approval from PayPal to request this permission.
Create and manage PayPal payment buttons on your behalf.	BUTTON_MANAGER includes <ul style="list-style-type: none"> • BMManageButtonStatus • BMCreateButton • BMUpdateButton • BMSetInventory • BMGetInventory • BMButtonSearch
Obtain basic attributes for specified user, such as first name, last name, and payer ID.	ACCESS_BASIC_PERSONAL_DATA required for GetBasicPersonalData NOTE: You must have prior approval from PayPal to request this permission.

Display description	Group ID includes
Obtain advanced attributes for specified user, such as date of birth and phone.	ACCESS_ADVANCED_PERSONAL_DATA required for GetAdvancedPersonalData NOTE: You must have prior approval from PayPal to request this permission.
Accept or deny a pending transaction.	MANAGE_PENDING_TRANSACTION_STATUS includes ManagePendingTransactionStatus
Reporting for recurring payments	RECURRING_PAYMENT_REPORT; valid for all countries except Indonesia, Turkey, Estonia, and the Russian Federation
Extended Pro processing	EXTENDED_PRO_PROCESSING_REPORT; valid for all countries except Indonesia, Turkey, Estonia, and the Russian Federation
Exception processing	EXCEPTION_PROCESSING_REPORT; valid for all countries except Indonesia, Turkey, Estonia, and the Russian Federation
Account Management Permission (MAM)	ACCOUNT_MANAGEMENT_PERMISSION; valid for all countries except Indonesia, Turkey, Estonia, and the Russian Federation
Manager your invoicing through a third party.	INVOICING includes: <ul style="list-style-type: none"> • UpdateInvoice • CancelInvoice • GetInvoiceDetails • MarkInvoiceAsPaid • SearchInvoices • CreateInvoice • SendInvoice • CreateAndSendInvoice

Permissions API Operations

The PayPal Permissions API includes operations to request, access, and cancel permissions. It also enables you to obtain the access token needed to determine permissions that an account holder has granted you.

API Operation	Description
CancelPermissions	Use the CancelPermissions API operation to cancel access to a set of permissions.
GetAccessToken	Use the GetAccessToken API operation to obtain an access token for a set of permissions.

API Operation	Description
GetPermissions	Use the GetPermissions API operation to obtain the permissions associated with an access token.
RequestPermissions	Use the RequestPermissions API operation to request permissions to execute API operations on a PayPal account holder's behalf.

2

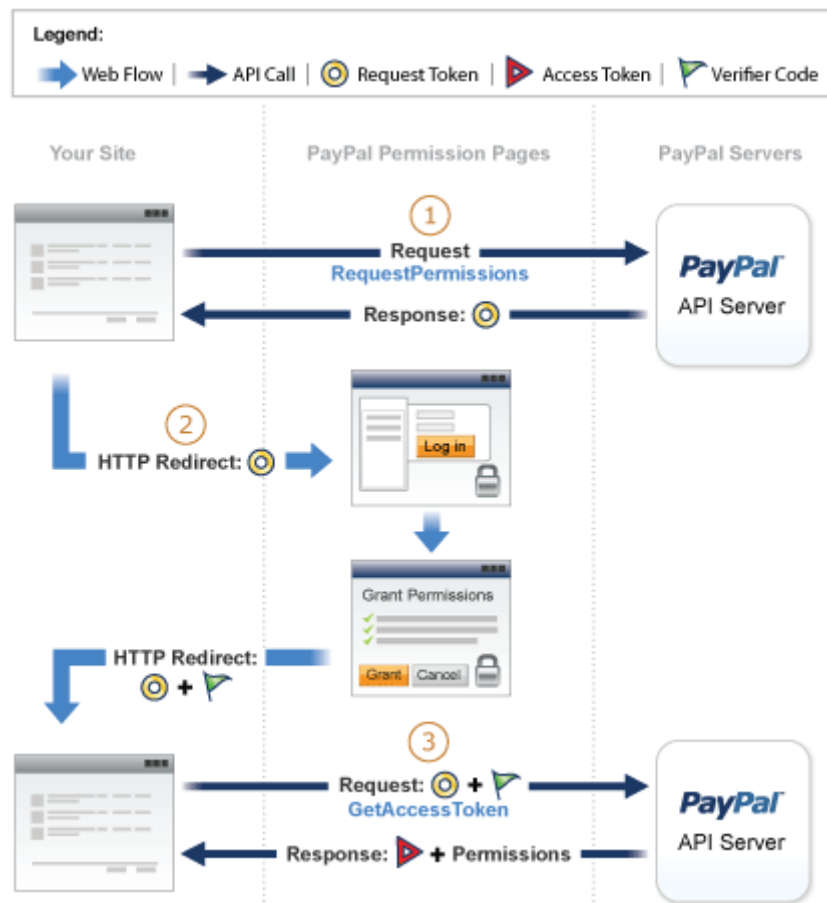

Using the Permissions Service

Use the Permissions Service API to obtain permission to execute PayPal API operations on behalf of PayPal account holders. You can use PayPal SDKs to generate authentication headers for PayPal Adaptive Payment and Adaptive Accounts APIs.

Obtaining Permissions

To obtain permissions from an account holder, you call `RequestPermissions` to make the request, redirect to PayPal to enable the account holder to approve the request, and call `GetAccessToken` to obtain the permissions and an access token. The access token enables you to create a signature for calling API operations as a third party, determine the permissions you can access, and cancel access to the permissions.

The following diagram shows the basic execution flow for obtaining permission as a third party to PayPal and an account holder:

To obtain permissions from an account holder, follow these steps:

1. Set up your request and call the `RequestPermissions` API operation.
 - Specify the return URL in the callback field.
 - Specify one or more group IDs, such as `EXPRESS_CHECKOUT`, in the scope field; one string per group ID.
 - Send the request to the `https://svcs.paypal.com/Permissions/RequestPermission` endpoint.

NOTE: Use `https://svcs.sandbox.paypal.com/Permissions/...` for the Sandbox.

```
curl -s --insecure
-H "X-PAYPAL-SECURITY-USERID: api_username"
-H "X-PAYPAL-SECURITY-PASSWORD: api_password"
-H "X-PAYPAL-SECURITY-SIGNATURE: api_signature"
-H "X-PAYPAL-REQUEST-DATA-FORMAT: NV"
-H "X-PAYPAL-RESPONSE-DATA-FORMAT: NV"
-H "X-PAYPAL-APPLICATION-ID: app_id"
https://svcs.sandbox.paypal.com/Permissions/RequestPermissions -d
"requestEnvelope.errorLanguage=en_US
&scope=EXPRESS_CHECKOUT
&callback=http://your_return_url"
```

PayPal responds with a request token that you use in following steps to obtain an access token.

NOTE: The request token from this step is different than the access token, which you use to access permissions that already have been granted.

2. Redirect the account holder's browser to PayPal and include the request token in the `request_token` parameter.

```
https://www.paypal.com/cgi-bin/webscr?
cmd=_grant-permission&request_token=token
```

PayPal initiates granting permissions. When the account holder grants permissions, PayPal returns a verification code, which you use in the next step.

NOTE: The verification code expires in about 15 minutes.

3. Set up your request and call the `GetAccessToken` API operation.

- Specify the request token in the `token` field.
- Specify the verification code in the `verifier` field.
- Send the request to
`https://svcs.paypal.com/Permissions/GetAccessToken.`

```
curl -s --insecure
-H "X-PAYPAL-SECURITY-USERID: api_username"
-H "X-PAYPAL-SECURITY-PASSWORD: api_password"
-H "X-PAYPAL-SECURITY-SIGNATURE: api_signature"
-H "X-PAYPAL-REQUEST-DATA-FORMAT: NV"
-H "X-PAYPAL-RESPONSE-DATA-FORMAT: NV"
-H "X-PAYPAL-APPLICATION-ID: app_id"
https://svcs.sandbox.paypal.com/Permissions/GetAccessToken -d
"requestEnvelope.errorLanguage=en_US
&token=token
&verifier=code"
```

PayPal responds with the scope, which is a list of the permissions granted by the account holder, and an access token and associated secret.

After Completing This Task:

You use the access token and associated secret to create an authentication header, X-PAYPAL-AUTHORIZATION. When you call PayPal API operations, the authentication header specifies whether you have permission to make the call on behalf of the account holder.

Generating Signatures for the Authentication Header

After you have an access token and associated secret, you can create an authentication header, X-PAYPAL-AUTHORIZATION, and use it in calls to PayPal APIs. You use either the API signature or certificate from the account holder's profile when you create the header.

The X-PAYPAL-AUTHORIZATION header contains

- A timestamp
- The access token from the GetAccessToken response
- A signature generated from the following information:
 - Your API username
 - Your API password
 - The access token from the GetAccessToken response
 - The token secret from the GetAccessToken response
 - The endpoint for the PayPal API operation's request, such as `https://api.paypal.com/nvp`
 - The HTTPS delivery method, such as POST
 - Request parameters associated with the request

NOTE: You can use a certificate instead of the API username and API signature.

PayPal provides SDKs that you can use to generate authentication header signatures for Java, PHP, and .NET. When you use the SDK, you will get two values, such as the following:

```
Signature=tLWUfZU9Np/7qgPqWF1LMIWjY1s=
Timestamp=1285744515
```

Use the values to construct the header as follows:

```
X-PAYPAL-AUTHORIZATION=timestamp=1285744515,
token=5wZptMaHXQfihLKZFscuGjeKOPqQrlfHFPqRc1QlItX3vYi6,
signature=tLWUfZU9Np/7qgPqWF1LMIWjY1s=
```

Java Example

The PayPal Java SDK provides a method for creating the X-PAYPAL-AUTHORIZATION header. See the `getAuthHeader` method in the `OauthSignature.java` file of the `com.paypal.sdk.util` package in `paypal_base.jar`.

```
import java.util.Iterator;
import java.util.Map;
import com.paypal.sdk.util.OAuthSignature;
import com.paypal.sdk.util.OAuthSignature.HTTPMethod;
public class TestOAuthSignature {
    private static String apiUserName = "..._biz_apil.gmail.com";
    private static String apiPassword = "1255077037";
    private static String accessToken = "2WhQDDM4...";
    private static String tokenSecret = "j0YhbTgcy.K5VjpQa7Ru8oM...";
    private static HTTPMethod httpMethod = OAuthSignature.HTTPMethod.POST;
    private static String scriptURI = "https://api.sandbox.paypal.com/nvp";
    private static Map queryParams = null;
    public static void main(String[] args) {
        try{
            Map map = OAuthSignature.getAuthHeader(apiUserName, apiPassword,
                accessToken, tokenSecret, httpMethod, scriptURI, queryParams);
            // Display Signature and Timestamp to console.
            Iterator itr = map.entrySet().iterator();
            while(itr.hasNext()){
                Map.Entry entry = (Map.Entry)itr.next();
                System.out.println(entry.getKey() + ": " + entry.getValue());
            }
        }catch (Exception e) {
            // handle exception
        }
    }
}
```

Granting Permission to Access Account Holder Information

After you have created an authentication header as described above, you can call `GetBasicPersonalData` and `GetAdvancedPersonalData` to obtain basic and advanced information about the account holder.

Basic information includes the following:

- First Name
- Last Name
- Email
- Full Name
- Business Name
- Country
- PayerID

Advanced information includes the following:

- Date of birth
- Postcode
- Street1
- Street2
- City
- State
- Phone

These two API calls work like all other APIs in PayPal – if you have permission, the call will succeed; if not, the call will fail. For both APIs, if the account holder has not given consent to access the requested data, the service will return an error indicating that you do not have permission to perform the action on behalf of another user.

The form of the call is as follows:

```
curl -s --insecure ^
-H "X-PAYPAL-AUTHORIZATION: token=...,signature=..., timeStamp=..." ^
-H "X-PAYPAL-REQUEST-DATA-FORMAT:NV" ^
-H "X-PAYPAL-RESPONSE-DATA-FORMAT:NV" ^
-H "X-PAYPAL-APPLICATION-ID:APP-1JE4291016473214C" ^
-d "attributeList.attribute(0)=http://axschema.org/contact/email^
&attributeList.attribute(1)=http://schema.openid.net/contact/fullname^
&requestEnvelope.errorLanguage=en_US"
https://svcs.paypal.com/Permissions/GetBasicPersonalData
```

```
responseEnvelope.timestamp=2011-10-24T01%3A37%3A26.565-07%3A00&responseEnvelope.ack=Success&responseEnvelope.correlationId=5d8bf1913be02&responseEnvelope.build=2210301&response.personalData(0).personalDataKey=http%3A%2F%2Fschema.org%2Fcontact%2Femail&response.personalData(0).personalDataValue=jdoe%40someisp.com&response.personalData(1).personalDataKey=http%3A%2F%2Fschema.openid.net%2Fcontact%2Ffullname&response.personalData(1).personalDataValue=John+Doe
```

Notes:

1. The X-PAYPAL-AUTHORIZATION header was generated with URL "https://svcs.paypal.com/Permissions/GetBasicPersonalData".
2. ACCESS_BASIC_PERSONAL_DATA and ACCESS_ADVANCED_PERSONAL_DATA access permissions have been previously granted to the API caller.
3. This example illustrates use of the GetBasicPersonalData API. A request to GetAdvancedPersonalData would be the same except for the URI, and the response fields would differ.
4. The URL used in curl and the URL used to generate X-PAYPAL-AUTHORIZATION must be identical.

3

RequestPermissions API Operation

Use the RequestPermissions API operation to request permissions to execute API operations on a PayPal account holder's behalf.

RequestPermissionsRequest Message

RequestPermissions Request Fields

Field	Description
scope	<p>xs:string</p> <p>(Required) At least 1 of the following permission categories:</p> <ul style="list-style-type: none"> • EXPRESS_CHECKOUT - Express Checkout • DIRECT_PAYMENT - Direct payment by debit or credit card • SETTLEMENT_CONSOLIDATION - Settlement consolidation • SETTLEMENT_REPORTING - Settlement reporting • AUTH_CAPTURE - Payment authorization and capture • MOBILE_CHECKOUT - Mobile checkout • BILLING_AGREEMENT - Billing agreements • REFERENCE_TRANSACTION - Reference transactions • AIR_TRAVEL - Express Checkout for UTAP • MASS_PAY - Mass pay • TRANSACTION_DETAILS - Transaction details • TRANSACTION_SEARCH - Transaction search • RECURRING_PAYMENTS - Recurring payments • ACCOUNT_BALANCE - Account balance • ENCRYPTED_WEBSITE_PAYMENTS - Encrypted website payments • REFUND - Refunds • NON_REFERENCED_CREDIT - Non-referenced credit • BUTTON_MANAGER - Button Manager • MANAGE_PENDING_TRANSACTION_STATUS includes ManagePendingTransactionStatus • RECURRING_PAYMENT_REPORT - Reporting for recurring payments • EXTENDED_PRO_PROCESSING_REPORT - Extended Pro processing • EXCEPTION_PROCESSING_REPORT - Exception processing • ACCOUNT_MANAGEMENT_PERMISSION - Account Management Permission (MAM) • ACCESS_BASIC_PERSONAL_DATA - User attributes • ACCESS_ADVANCED_PERSONAL_DATA - User attributes • INVOICING - Invoicing
callback	<p>xs:string</p> <p>(Required) Your callback function that specifies actions to take after the account holder grants or denies the request.</p>
requestEnvelope	<p>common:requestEnvelope</p> <p>(Required) Information common to each API operation, such as the language in which an error message is returned.</p>

RequestEnvelope Fields

Field	Description
detailLevel	common:DetailLevelCode (Optional) Level of detail required by the client application for components. It is one of the following values: <ul style="list-style-type: none"> ReturnAll – This value provides the maximum level of detail (default).
errorLanguage	xs:string (Required) RFC 3066 language in which error messages are returned; by default it is en_US, which is the only language currently supported.

RequestPermissionsResponse Message

RequestPermissions Response Fields

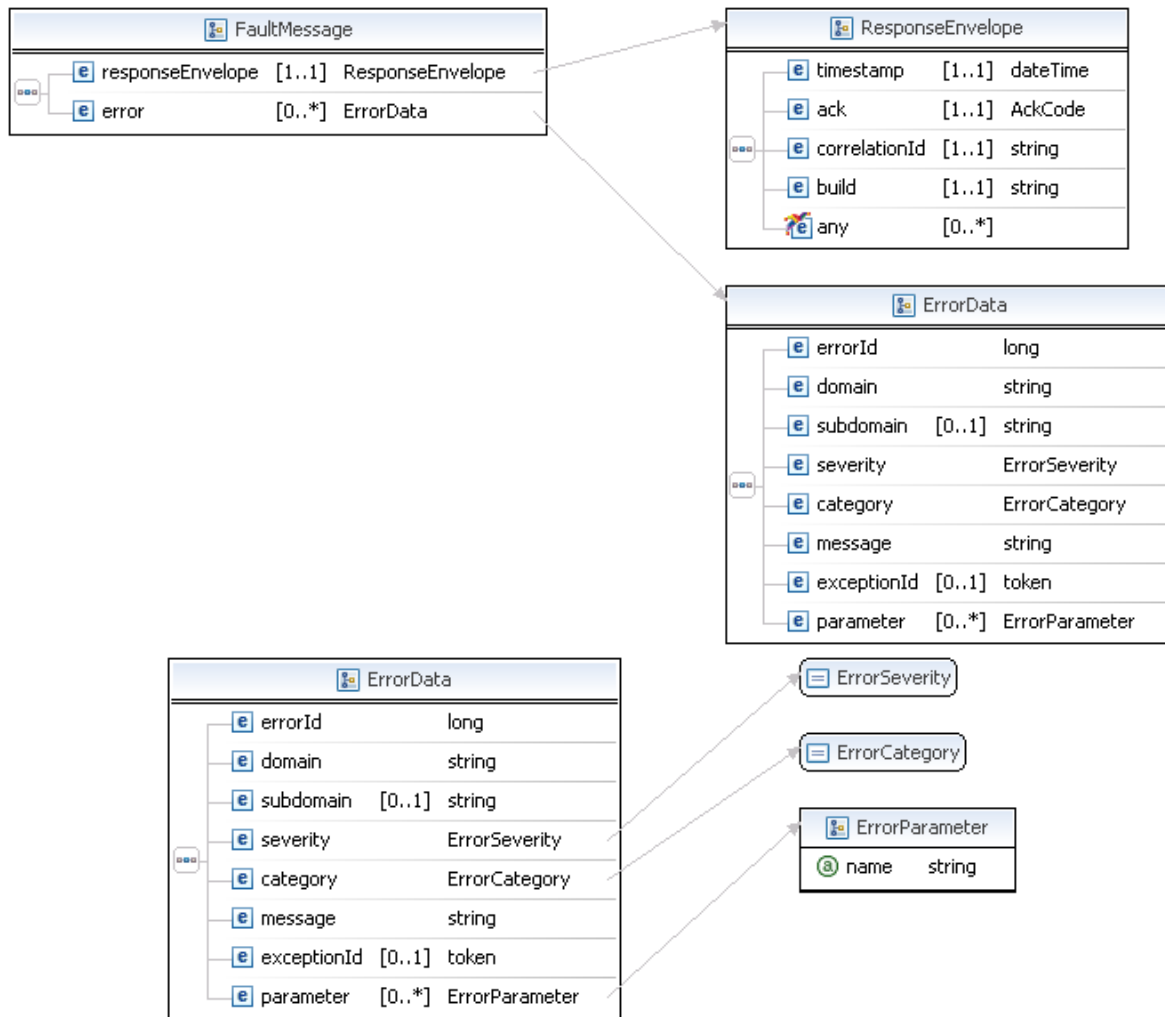

Field	Description
token	xs:string (Required) A token from PayPal that enables the request to obtain permissions.
responseEnvelope	common:ResponseEnvelope Common response information, including a timestamp and the response acknowledgement status.

ResponseEnvelope Fields

Field	Description
ack	<code>common:AckCode</code> Acknowledgement code. It is one of the following values: <ul style="list-style-type: none">• Success – The operation completed successfully.• Failure – The operation failed.• Warning – Warning.• SuccessWithWarning – The operation completed successfully; however, there is a warning message.• FailureWithWarning – The operation failed with a warning message.
build	Build number; it is used only by Developer Technical Support.
correlationId	Correlation ID; it is used only by Developer Technical Support. NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.
timestamp	Date on which the response was sent. The time is currently not supported. NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.

PPFault Message

The PPFaultMessage returns ErrorData and the ResponseEnvelope information to your application if an error occurs.

FaultMessage Fields

Field	Description
error	common:ErrorData Detailed error information.
responseEnvelope	common:ResponseEnvelope Common response information, including a timestamp and the response acknowledgement status.

ErrorData Fields

Field	Description
category	<code>common:ErrorCategory</code> The location where the error occurred. Possible values are: <ul style="list-style-type: none"> • System – The system encountered errors; try again • Application – The application encountered errors; try again • Request – The request was incorrect
domain	The domain to which this service belongs.
errorId	A number that uniquely identifies a particular error.
exceptionID	This field is not used.
message	A description of the error.
parameter	<code>common:ErrorParameter</code> Represents contextual information about the error.
severity	<code>common:ErrorSeverity</code> The severity of the error encountered. Possible values are: <ul style="list-style-type: none"> • Error – Processing of the request was interrupted • Warning – Processing of the request was completed
subdomain	This field is not used.

ResponseEnvelope Fields

Field	Description
ack	<code>common:AckCode</code> Acknowledgement code. It is one of the following values: <ul style="list-style-type: none"> • Success – The operation completed successfully. • Failure – The operation failed. • Warning – Warning. • SuccessWithWarning – The operation completed successfully; however, there is a warning message. • FailureWithWarning – The operation failed with a warning message.
build	Build number; it is used only by Developer Technical Support.
correlationId	Correlation ID; it is used only by Developer Technical Support. NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.

Field	Description
timestamp	Date on which the response was sent. The time is currently not supported. NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.

RequestPermission Errors

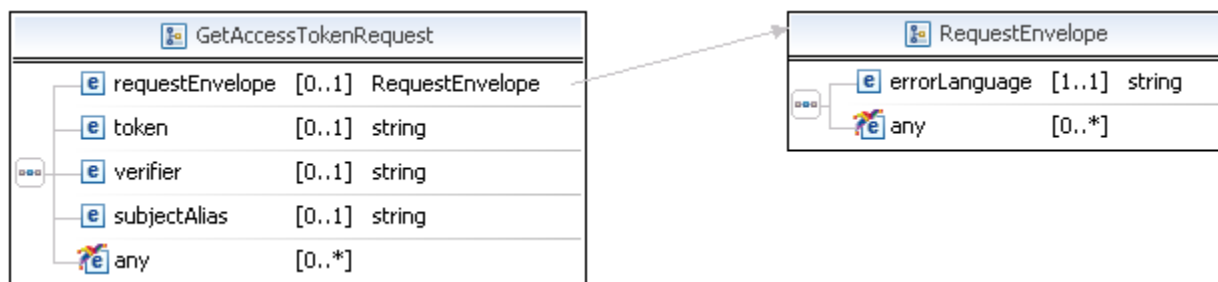

Code	Message	Additional Information
520002	Internal error	
550001	User is not allowed to perform this action	
560022	Invalid API Caller Account	
580022	Transaction refused because of an invalid argument. See additional error messages for details.	
580028	Invalid Redirect URL	

4

GetAccessToken API Operation

Use the GetAccessToken API operation to obtain an access token for a set of permissions.

GetAccessTokenRequest Message

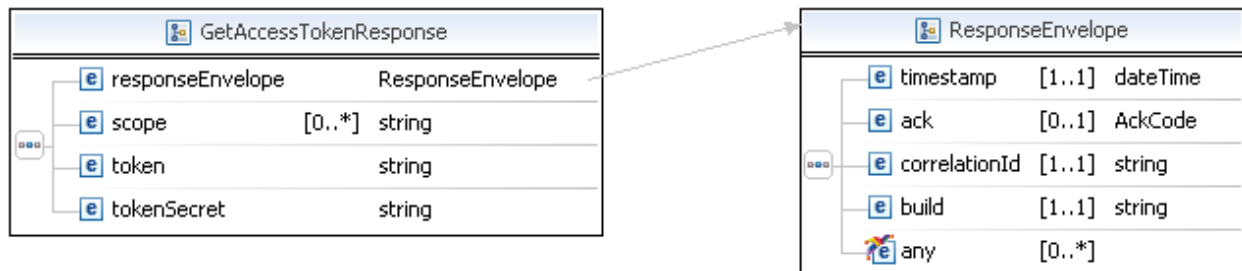

GetAccessTokenRequest Fields

Field	Description
token	xs:string (Required) The request token from the response to RequestPermissions.
verifier	xs:string (Required) The verification code returned in the redirect from PayPal to the return URL.
subjectAlias	xs:string Do not use.
requestEnvelope	common:requestEnvelope (Required) Information common to each API operation, such as the language in which an error message is returned.

RequestEnvelope Fields

Field	Description
detailLevel	common:DetailLevelCode (Optional) Level of detail required by the client application for components. It is one of the following values: <ul style="list-style-type: none"> ReturnAll – This value provides the maximum level of detail (default).
errorLanguage	xs:string (Required) RFC 3066 language in which error messages are returned; by default it is en_US, which is the only language currently supported.

GetAccessToken Response Message

GetAccessTokenResponse Fields

Field	Description
scope	<p>xs:string</p> <p>The group IDs of the permission categories associated with the access token:</p> <ul style="list-style-type: none"> • EXPRESS_CHECKOUT - Express Checkout • DIRECT_PAYMENT - Direct payment by debit or credit card • SETTLEMENT_CONSOLIDATION - Settlement consolidation • SETTLEMENT_REPORTING - Settlement reporting • AUTH_CAPTURE - Payment authorization and capture • MOBILE_CHECKOUT - Mobile checkout • BILLING_AGREEMENT - Billing agreements • REFERENCE_TRANSACTION - Reference transactions • AIR_TRAVEL - Express Checkout for UTAP • MASS_PAY - Mass pay • TRANSACTION_DETAILS - Transaction details • TRANSACTION_SEARCH - Transaction search • RECURRING_PAYMENTS - Recurring payments • ACCOUNT_BALANCE - Account balance • ENCRYPTED_WEBSITE_PAYMENTS - Encrypted website payments • REFUND - Refunds • NON_REFERENCED_CREDIT - Non-referenced credit • BUTTON_MANAGER - Button Manager • MANAGE_PENDING_TRANSACTION_STATUS includes ManagePendingTransactionStatus • RECURRING_PAYMENT_REPORT - Reporting for recurring payments • EXTENDED_PRO_PROCESSING_REPORT - Extended Pro processing • EXCEPTION_PROCESSING_REPORT - Exception processing • ACCOUNT_MANAGEMENT_PERMISSION - Account Management Permission (MAM) • ACCESS_BASIC_PERSONAL_DATA - User attributes • ACCESS_ADVANCED_PERSONAL_DATA - User attributes • INVOICING - Invoicing
token	<p>xs:string</p> <p>The access token that identifies a set of permissions.</p>

correlationId	<p>Correlation ID; it is used only by Developer Technical Support.</p> <p>NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.</p>
timestamp	<p>Date on which the response was sent. The time is currently not supported.</p> <p>NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.</p>

PPFault Message

The PPFaultMessage returns ErrorData and the ResponseEnvelope information to your application if an error occurs.

FaultMessage Fields

Field	Description
error	common:ErrorData Detailed error information.
responseEnvelope	common:ResponseEnvelope Common response information, including a timestamp and the response acknowledgement status.

ErrorData Fields

Field	Description
category	<p><code>common:ErrorCategory</code></p> <p>The location where the error occurred.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • System – The system encountered errors; try again • Application – The application encountered errors; try again • Request – The request was incorrect
domain	The domain to which this service belongs.
errorId	A number that uniquely identifies a particular error.
exceptionID	This field is not used.
message	A description of the error.
parameter	<p><code>common:ErrorParameter</code></p> <p>Represents contextual information about the error.</p>
severity	<p><code>common:ErrorSeverity</code></p> <p>The severity of the error encountered.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Error – Processing of the request was interrupted • Warning – Processing of the request was completed
subdomain	This field is not used.

ResponseEnvelope Fields

Field	Description
ack	<p><code>common:AckCode</code></p> <p>Acknowledgement code. It is one of the following values:</p> <ul style="list-style-type: none"> • Success – The operation completed successfully. • Failure – The operation failed. • Warning – Warning. • SuccessWithWarning – The operation completed successfully; however, there is a warning message. • FailureWithWarning – The operation failed with a warning message.
build	Build number; it is used only by Developer Technical Support.
correlationId	<p>Correlation ID; it is used only by Developer Technical Support.</p> <p>NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.</p>

Field	Description
timestamp	Date on which the response was sent. The time is currently not supported. NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.

GetAccessToken Errors

Code	Message	Additional Information
579058	Request token is Expired	
580022	Invalid Request token or Verifier Code	

5

GetPermissions API Operation

Use the GetPermissions API operation to obtain the permissions associated with an access token.

GetPermissionsRequest Message

GetPermissionsRequest Fields

Field	Description
token	xs:string (Required) The access token that identifies a set of permissions.
requestEnvelope	common:requestEnvelope (Required) Information common to each API operation, such as the language in which an error message is returned.

RequestEnvelope Fields

Field	Description
detailLevel	common:DetailLevelCode (Optional) Level of detail required by the client application for components. It is one of the following values: <ul style="list-style-type: none"> ReturnAll – This value provides the maximum level of detail (default).
errorLanguage	xs:string (Required) RFC 3066 language in which error messages are returned; by default it is en_US, which is the only language currently supported.

GetPermissionsResponse Message

GetPermissionsResponse Fields

Field	Description
scope	<p>xs:string</p> <p>Any number of permission categories from the following list:</p> <ul style="list-style-type: none"> • EXPRESS_CHECKOUT - Express Checkout • DIRECT_PAYMENT - Direct payment by debit or credit card • SETTLEMENT_CONSOLIDATION - Settlement consolidation • SETTLEMENT_REPORTING - Settlement reporting • AUTH_CAPTURE - Payment authorization and capture • MOBILE_CHECKOUT - Mobile checkout • BILLING_AGREEMENT - Billing agreements • REFERENCE_TRANSACTION - Reference transactions • AIR_TRAVEL - Express Checkout for UTAP • MASS_PAY - Mass pay • TRANSACTION_DETAILS - Transaction details • TRANSACTION_SEARCH - Transaction search • RECURRING_PAYMENTS - Recurring payments • ACCOUNT_BALANCE - Account balance • ENCRYPTED_WEBSITE_PAYMENTS - Encrypted website payments • REFUND - Refunds • NON_REFERENCED_CREDIT - Non-referenced credit • BUTTON_MANAGER - Button Manager • MANAGE_PENDING_TRANSACTION_STATUS includes ManagePendingTransactionStatus • RECURRING_PAYMENT_REPORT - Reporting for recurring payments • EXTENDED_PRO_PROCESSING_REPORT - Extended Pro processing • EXCEPTION_PROCESSING_REPORT - Exception processing • ACCOUNT_MANAGEMENT_PERMISSION - Account Management Permission (MAM) • ACCESS_BASIC_PERSONAL_DATA - User attributes • ACCESS_ADVANCED_PERSONAL_DATA - User attributes • INVOICING - Invoicing
responseEnvelope	<p>common:ResponseEnvelope</p> <p>Common response information, including a timestamp and the response acknowledgement status.</p>

ResponseEnvelope Fields

Field	Description
ack	<code>common:AckCode</code> Acknowledgement code. It is one of the following values: <ul style="list-style-type: none">• Success – The operation completed successfully.• Failure – The operation failed.• Warning – Warning.• SuccessWithWarning – The operation completed successfully; however, there is a warning message.• FailureWithWarning – The operation failed with a warning message.
build	Build number; it is used only by Developer Technical Support.
correlationId	Correlation ID; it is used only by Developer Technical Support. NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.
timestamp	Date on which the response was sent. The time is currently not supported. NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.

PPFault Message

The PPFaultMessage returns ErrorData and the ResponseEnvelope information to your application if an error occurs.

FaultMessage Fields

Field	Description
error	common:ErrorData Detailed error information.
responseEnvelope	common:ResponseEnvelope Common response information, including a timestamp and the response acknowledgement status.

ErrorData Fields

Field	Description
category	<code>common:ErrorCategory</code> The location where the error occurred. Possible values are: <ul style="list-style-type: none"> • System – The system encountered errors; try again • Application – The application encountered errors; try again • Request – The request was incorrect
domain	The domain to which this service belongs.
errorId	A number that uniquely identifies a particular error.
exceptionID	This field is not used.
message	A description of the error.
parameter	<code>common:ErrorParameter</code> Represents contextual information about the error.
severity	<code>common:ErrorSeverity</code> The severity of the error encountered. Possible values are: <ul style="list-style-type: none"> • Error – Processing of the request was interrupted • Warning – Processing of the request was completed
subdomain	This field is not used.

ResponseEnvelope Fields

Field	Description
ack	<code>common:AckCode</code> Acknowledgement code. It is one of the following values: <ul style="list-style-type: none"> • Success – The operation completed successfully. • Failure – The operation failed. • Warning – Warning. • SuccessWithWarning – The operation completed successfully; however, there is a warning message. • FailureWithWarning – The operation failed with a warning message.
build	Build number; it is used only by Developer Technical Support.
correlationId	Correlation ID; it is used only by Developer Technical Support. NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.

Field	Description
timestamp	Date on which the response was sent. The time is currently not supported. NOTE: You must log and store this data for every response you receive. PayPal Technical Support uses the information to assist with reported issues.

GetBasicPersonalData API Operation

Use the GetBasicPersonalData API operation to obtain basic personal data for an account holder.

GetBasicPersonalDataRequest Message

GetBasicPersonalDataRequest Fields

Field	Description
attributeList	tns:PersonalAttributeList (Required) The list of personal attributes requested for this account.
requestEnvelope	common:requestEnvelope (Required) Information common to each API operation, such as the language in which an error message is returned.

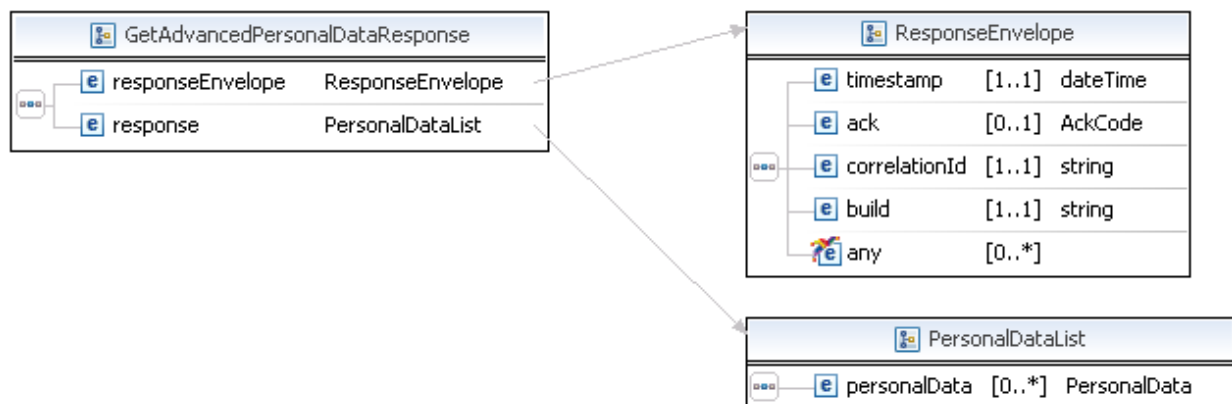

PersonalAttributeList Fields

Field	Description
attribute	<p>tns:PersonalAttribute</p> <p>The attributes whose values you are requesting. You specify one or more of the following URIs:</p> <ul style="list-style-type: none"> • http://axschema.org/namePerson/first – First name • http://axschema.org/namePerson/last – last name • http://axschema.org/contact/email – Email • http://schema.openid.net/contact/fullname – Full name • http://openid.net/schema/company/name – Business name • http://axschema.org/contact/country/home – Country • https://www.paypal.com/webapps/auth/schema/payerID – Payer ID

RequestEnvelope Fields

Field	Description
detailLevel	<p>common:DetailLevelCode</p> <p>(Optional) Level of detail required by the client application for components. It is one of the following values:</p> <ul style="list-style-type: none"> • ReturnAll – This value provides the maximum level of detail (default).
errorLanguage	<p>xs:string</p> <p>(Required) RFC 3066 language in which error messages are returned; by default it is en_US, which is the only language currently supported.</p>

GetBasicPersonalDataResponse Message

GetBasicPersonalData Response Fields

Field	Description
response	tns:PersonalDataList The attributes for which you have been granted permission to access; one or more of the following URIs: <ul style="list-style-type: none"> • http://axschema.org/namePerson/first – First name • http://axschema.org/namePerson/last – last name • http://axschema.org/contact/email – Email • http://schema.openid.net/contact/fullname – Full name • http://openid.net/schema/company/name – Business name • http://axschema.org/contact/country/home – Country • https://www.paypal.com/webapps/auth/schema/payerID – Payer ID
responseEnvelope	common:ResponseEnvelope Common response information, including a timestamp and the response acknowledgement status.

PersonalDataList Fields

Field	Description
personalData	tns:PersonalData The list of name-value pairs of personal data in the response.

PersonalData Fields

Field	Description
personalDataKey	<p>tns:PersonalAttribute</p> <p>The attributes whose values you are requesting. You specify one or more of the following URIs:</p> <ul style="list-style-type: none"> • http://axschema.org/namePerson/first – First name • http://axschema.org/namePerson/last – last name • http://axschema.org/contact/email – Email • http://schema.openid.net/contact/fullname – Full name • http://openid.net/schema/company/name – Business name • http://axschema.org/contact/country/home – Country • https://www.paypal.com/webapps/auth/schema/payerID – Payer ID
personalDataValue	<p>xs:String</p> <p>The value associated with the key</p>

ResponseEnvelope Fields

Field	Description
ack	<p>common:AckCode</p> <p>Acknowledgement code. It is one of the following values:</p> <ul style="list-style-type: none"> • Success – The operation completed successfully. • Failure – The operation failed. • Warning – Warning. • SuccessWithWarning – The operation completed successfully; however, there is a warning message. • FailureWithWarning – The operation failed with a warning message.

Permission Commands

The web flows associated with Permissions Service require you to redirect the account holder's browser to PayPal. When you redirect to the `webscr` endpoint, you must send a command that identifies the flow and associated parameters.

grant-permission Command

The account holder can log in to `paypal.com` and grant permissions to you when you redirect the account holder's browser to `paypal.com` with the `_grant-permission` command.

Redirect to PayPal using the `_grant-permission` command

Redirect to PayPal:

```
https://www.paypal.com/cgi-bin/webscr?  
cmd=_grant-permission&request_token=token
```

Parameter	Description
cmd	(Required) <code>_grant-permission</code>
request_token	(Required) The token from the <code>RequestPermissions</code> response message.

Response to `_grant-permission` command from PayPal

PayPal redirects to the callback URL you set in the `RequestPermissions` request. It may include the following parameters:

Parameter	Description
verification_code	Verification code; returned if the account holder agreed to grant permissions. Expires after 15 minutes.
request_token	The token from the <code>RequestPermissions</code> response message; returned if the account holder agreed to grant permissions.
Error	An error code, which is equal to Internal Error if an error occurred.

If the account holder canceled, no parameters are returned.

Past Releases

Permissions Service is intended for developers implementing solutions that require executing a PayPal API operation on behalf of an account holder. Enhancements introduced in past releases are described here.

Release 84.0 Features

Release 84.0 of the Permissions API introduces two new permission groups and two new APIs.

NOTE: Changes to API operations are backward-compatible.

Addition of Two New Groups

Display description	Group ID includes
New: Obtain basic attributes for specified user, such as first name, last name, and payer ID.	ACCESS_BASIC_PERSONAL_DATA required for GetBasicPersonalData NOTE: You must have prior approval from PayPal to request this permission.
New: Obtain advanced attributes for specified user, such as date of birth and phone.	ACCESS_ADVANCED_PERSONAL_DATA required for GetAdvancedPersonalData NOTE: You must have prior approval from PayPal to request this permission.

Addition of Two New APIs

API	Description
New: GetBasicPersonalData	Request to retrieve basic personal data for an account holder. Accepts PersonalAttributeList as request, and responds with PersonalDataList. This call will accept only 'Basic' attributes and ignore others.
New: GetAdvancedPersonalData	Request to retrieve more sensitive personal data for an account holder. Accepts PersonalAttributeList as request, and responds with PersonalDataList. This call will accept both 'Basic' and Advanced attributes.

Release 74.0 Features

Release 74.0 of the Permissions API introduces several new permission categories and, language support, and redirect response parameters.

NOTE: Changes to API operations are backward-compatible.

Changes to Permission Categories

Display description	Group ID includes
Consolidate funds from two or more child accounts into a master account.	SETTLEMENT_CONSOLIDATION includes Settlement Consolidation; valid for all countries except Indonesia, Turkey, Estonia, and the Russian Federation NOTE: You must have prior approval from PayPal to request this permission.
Provide reporting for consolidated funds.	SETTLEMENT_REPORTING includes Settlement Reporting; valid for all countries except Indonesia, Turkey, Estonia, and the Russian Federation NOTE: You must have prior approval from PayPal to request this permission.
New: Reporting for recurring payments	RECURRING_PAYMENT_REPORT; valid for all countries except Indonesia, Turkey, Estonia, and the Russian Federation
New: Extended Pro processing	EXTENDED_PRO_PROCESSING_REPORT; valid for all countries except Indonesia, Turkey, Estonia, and the Russian Federation
New: Exception processing	EXCEPTION_PROCESSING_REPORT; valid for all countries except Indonesia, Turkey, Estonia, and the Russian Federation
New: Account Management Permission (MAM)	ACCOUNT_MANAGEMENT_PERMISSION; valid for all countries except Indonesia, Turkey, Estonia, and the Russian Federation

Changes to RequestPermissionRequest Fields for Release 74.0

Field	Description
scope	xs:string (Required) New values: <ul style="list-style-type: none"> • RECURRING_PAYMENT_REPORT - Reporting for recurring payments • EXTENDED_PRO_PROCESSING_REPORT - Extended Pro processing • EXCEPTION_PROCESSING_REPORT - Exception processing • ACCOUNT_MANAGEMENT_PERMISSION - Account Management Permission (MAM)

Changes to GetAccessTokenResponse and GetPermissionsResponse Fields for Release 74.0

Field	Description
scope	xs:string New values: <ul style="list-style-type: none"> • RECURRING_PAYMENT_REPORT - Reporting for recurring payments • EXTENDED_PRO_PROCESSING_REPORT - Extended Pro processing • EXCEPTION_PROCESSING_REPORT - Exception processing • ACCOUNT_MANAGEMENT_PERMISSION - Account Management Permission (MAM)

Permissions Service Revision History

The revision history identifies changes to Permissions Service documentation at a high level.

Date	Description
05/02/12	Maintenance release.
02/09/12	Maintenance release.
10/09/11	Added new groups and APIs for getting personal data. This version of the guide corresponds to release version 84.
05/24/11	Added new permission groups and information about return parameters for the redirect. This version of the guide corresponds to release version 74.
04/05/11	Initial release draft, which corresponds to release version 71. This guide replaces the earlier Permissions Service guide, last published in October, 2009, which was based on a non-platform API.
10/22/10	Initial draft for version 1.6.0.
